Open source -
what is it good
for?

Randy
Metcalf

These are the points to take away from this talk:

- open source software is a viable and cost-effective option
- good policy is based on sound research and best practice
- JISC's open source software policy is good policy
- good policy needs to be discussed, understood, and embedded into current practice

In this talk

Open source -
what is it good
for?

Randy
Metcalfe

- OSS Watch
- background to the JISC policy
- the policy
- 3 scenarios

OSS Watch: the UK open source software advisory service

Open source -
what is it good
for?

Randy
Metcalf

OSS Watch provides unbiased advice and guidance on free and open source software for UK higher and further education.

- strategic IT decision-makers
- IT managers and technical staff
- software developers
- academic end-users

OSS Watch is funded by the Joint Information Systems Committee (JISC) and based within the Research Technologies Service at the University of Oxford.

welcome

OSS Watch provides unbiased advice and guidance about free and open source software for UK further and higher education.

What does *open source* mean? For OSS Watch open source software is always software released under an Open Source Initiative (OSI) certified licence. [Read the full article.](#)

Here you will find briefing notes on a wide variety of topics, presentations from OSS Watch conferences and other OSS Watch talks, links to useful external resources, and information about OSS Watch. If there is anything you are searching for concerning free and open source software in higher and further education in the UK that you do not find here, please let us know info@oss-watch.ac.uk.

You should also check the [OSS Watch wiki](#) and see if the topic which interests you has material there; if not, consider starting a page there yourself, and let the whole community help by bringing its experience and expertise to bear.

news

[Book review: Producing Open Source Software by Karl Fogel](#) [10 Jan 2006]
Mark Norman takes a look at this recently published book by seasoned open source software developer Karl Fogel. Fogel's extensive experience is complemented by an engaging style and the result is a highly readable and useful book that will be of interest to newbies and experts alike.

[What can LiveCDs do for you?](#) [10 Jan 2006]
LiveCDs, bootable CDs containing a whole operating system, are seeing increasing use in the field of computer forensics. However, don't be fooled into thinking that

events

[JISC Conference 2006, Birmingham, 14 March 2006](#) [20 Jan 2006]
The JISC (the Joint Information Systems Committee) Conference 2006 will be built on the theme of Supporting Education and Research. Keynote speakers include Dr Liz Beatty, Director of Learning and Teaching, HEFCE and Clifford Lynch, Executive Director, Coalition for Networked Information. The conference will reflect the breadth of JISC activities in providing guidance, advice and opportunities for the use of information and communications Technology (ICT) in education and research. Look for the OSS Watch stand in the exhibition hall - do come and say hello.

OSS Watch is *not* an advocacy group. There are many other groups across the world who fulfil the advocacy function, e.g.:

- Free Software Foundation
- Open Forum Europe
- SchoolForgeUK
- and many more

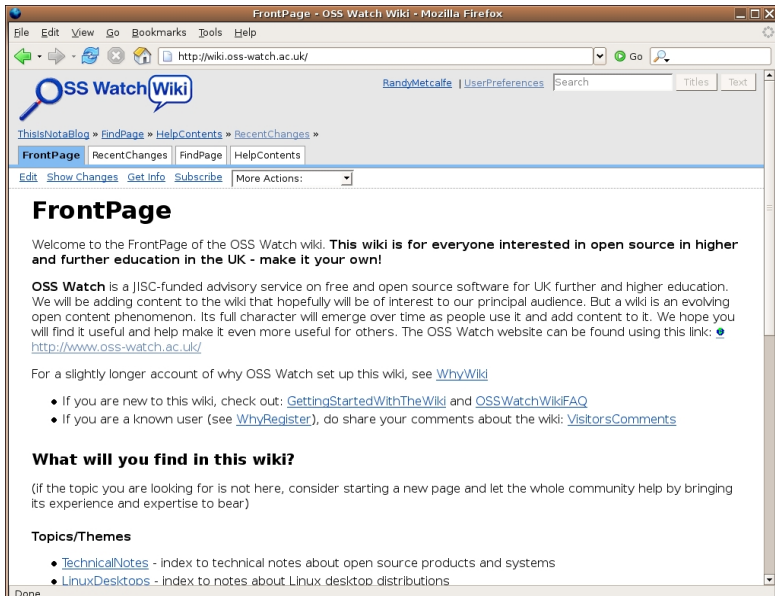

OSS Watch's role is to promote awareness and understanding of the legal, social, technical and economic issues that arise when educational institutions engage with free and open source software.

FrontPage

Welcome to the FrontPage of the OSS Watch wiki. **This wiki is for everyone interested in open source in higher and further education in the UK - make it your own!**

OSS Watch is a JISC-funded advisory service on free and open source software for UK further and higher education. We will be adding content to the wiki that hopefully will be of interest to our principal audience. But a wiki is an evolving open content phenomenon. Its full character will emerge over time as people use it and add content to it. We hope you will find it useful and help make it even more useful for others. The OSS Watch website can be found using this link: <http://www.oss-watch.ac.uk/>

For a slightly longer account of why OSS Watch set up this wiki, see [WhyWiki](#)

- If you are new to this wiki, check out: [GettingStartedWithTheWiki](#) and [OSSWatchWikiFAQ](#)
- If you are a known user (see [WhyRegister](#)), do share your comments about the wiki: [VisitorsComments](#)

What will you find in this wiki?

(If the topic you are looking for is not here, consider starting a new page and let the whole community help by bringing its experience and expertise to bear)

- BBC use of open source
<http://www.bbc.co.uk/opensource/>
- OSS Watch <http://www.oss-watch.ac.uk/>

Office of Government Commerce software trials: Sept 2003
- October 2004. Key conclusions:

- Open Source software is a viable and credible alternative to proprietary software for infrastructure implementations, and for meeting the requirements of the majority of desktop users; no significant obstacles were noted for the adoption of Open Source in infrastructure developments
- Adoption of Open Source software can generate significant savings in hardware and software costs for infrastructure implementation, and reduce the licensing costs and hardware refresh requirements for desktop implementation

UK Government open source policy(1)

Open source -
what is it good
for?

Randy
Metcalf

The second and current version of the UK government policy was issued on 28 October 2004:

- UK Government will consider OSS solutions alongside proprietary ones in IT procurements. Contracts will be awarded on a value for money basis.
- UK Government will only use products for interoperability that support open standards and specifications in all future IT developments.
- UK Government will seek to avoid lock-in to proprietary IT products and services.

UK Government open source policy(2)

Open source -
what is it good
for?

Randy
Metcalf

- UK Government will consider obtaining full rights to bespoke software code or customisations of COTS(Commercial Off The Shelf) software it procures wherever this achieves best value for money.
- Publicly funded Research and Development projects which aim to produce software outputs shall specify a proposed software exploitation route at the start of the project. At the completion of the project, the software shall be exploited either commercially or within an academic community or as OSS.

Becta study conducted in 2004-5, published immediately after the May election on 13 May 2005:

- Our study indicates that OSS can be implemented successfully as a networking solution within the technical infrastructure and with obvious cost benefits. It is important to adopt a strategic approach to financial planning in which any savings are then allocated to best meet the wider educational aims of the school.
- The use of office-based OSS such as StarOffice and OpenOffice offers a cost-effective alternative to proprietary office software.

BBC use and development of open source

Open source -
what is it good
for?

Randy
Metcalfe

The screenshot shows a Mozilla Firefox browser window titled "BBC - OpenSource - Mozilla Firefox". The address bar displays "http://www.bbc.co.uk/opensource/". The page header includes the BBC logo and navigation links: Home, TV, Radio, Talk, Where I Live, A-Z Index, and a search box. The main content area is titled "bbc.co.uk/opensource" and features a section for "BBC open source" with a paragraph explaining the site's purpose. To the right, there is a "Recent Projects" section listing various tools and APIs. A sidebar on the left contains links for "OpenSource", "About", "Projects", "Licensing", "FAQ", "Contact Us", and "Like this page?". The footer includes a disclaimer and a list of links: "About the BBC", "Help", "Terms of Use", "Privacy & Cookies Policy", and "RSS".

BBC open source

This site provides information about and links to BBC [open source](#) projects. It lists projects developed by the BBC where the source code has been released as open source. The site doesn't cover the many open source projects to which the BBC has contributed, but only those that the BBC has initiated and managed itself.

For the BBC, open source software development is an extension of our Public Service remit. Releasing open source software helps our audience get additional value from the work they've funded, and also get tools for free that they couldn't get any other way. It also allows people outside the BBC to extend projects in such a way that may in future be used in the BBC.

JISC sets up a pilot open source advisory service

Open source -
what is it good
for?

Randy
Metcalf

In April 2003, JISC issue an ITT for:

- a pilot advisory service designed to collate and disseminate information about the availability, and the respective strengths and weaknesses, of Open Source Software products relevant to UK Further and Higher Education.

The *JISC Policy on Open Source Software for JISC Projects and Services* was initially drafted by Sebastian Rahtz and Stuart Yeates of OSS Watch. It is based on

- UK government open source policy
- well-established best-practice in software engineering and management of intellectual property rights (IPR)
- current IT best-practice within JISC and higher and further education more broadly

It was confirmed by the principal JISC committee in February 2005, but not published on the JISC website until September 2005.

http://www.jisc.ac.uk/index.cfm?name=about_policy

JISC open source policy(1)

Open source -
what is it good
for?

Randy
Metcalfe

- Advice and guidance to the communities JISC serves must be neutral and unbiased, and must not discriminate between open source and closed source software products.
- Calls for funding, the bidding process, the award of funding, the administration of awarded funding and the evaluation of funded projects and services must not discriminate between open source and closed source software, unless the purpose of the projects or services specifically requires it.
- Where open source and closed source software are evaluated against one another, value for money over the expected lifetime of the system must be compared.

JISC open source policy(2)

Open source -
what is it good
for?

Randy
Metcalf

- Projects must maintain an IPR register, listing all contributors to their software and who owns the copyright on contributions.
- The ownership of code which is to be developed in joint projects must be established before work begins.
- Copyright of software, documentation, design materials, user interface and source code must be released under an OSI-approved open source licence, unless the bid explicitly argues why this should not be the case and proposes an alternative licence.

JISC open source policy(3)

Open source -
what is it good
for?

Randy
Metcalf

- Projects must state in their bid whether they foresee the project continuing beyond the timespan of funding, and if so whom they see participating in the project.
- Projects should engage with end users and other parties to encourage and build self- sustaining communities.
- Projects should accept bug reports, patches, translations and feedback from contributors outside the project.

3 scenarios

Open source -
what is it good
for?

Randy
Metcalfe

- project drafting bid against a JISC ITT
- funded project working to produce sustainable open source software
- service deploying open source infrastructure

Scenario 1: bidding for JISC funds

Open source -
what is it good
for?

Randy
Metcalfe

Bids need to demonstrate that they understand the IPR issues surrounding software development by

- making clear the exploitation route for any software generated
- identifying the OSI-certified licence to be used for any software released
 - or justify why a non-OSI licence should be used
- making clear how they will be building a developer or user community

Tip: why not contact OSS Watch when drafting the bid to seek unbiased advice and guidance about free and open source software.

Scenario 2: producing sustainable open source software

Open source -
what is it good
for?

Randy
Metcalfe

Software projects need to ensure that they

- maintain an IPR registry that clearly identifies the provenance and licence restrictions on any code entering the project
- encourage the submission of bug reports and patches from the wider development and user community
- release early and release often
- work towards a sustainable model of ongoing maintenance and further development of the software

Tip: why not contact OSS Watch as the project develops for ongoing support and guidance on best practice in free and open source software development methodologies.

Scenario 3: deploying open source in a service's infrastructure

Open source -
what is it good
for?

Randy
Metcalfe

JISC services that are procuring and deploying software for their service infrastructure need to

- consider open source alternatives in the procurement process
- compare open source against proprietary options on a value for money basis over the expected lifetime of the system

Tip: why not contact OSS Watch for suggestions of open source alternatives and the means to compare them adequately. Remember, OSS Watch always recommends that you go with the best solution that suits your needs, regardless of whether or not it is open source.

These are the points to take away from this talk:

- open source software is a viable and cost-effective option
- good policy is based on sound research and best practice
- JISC's open source software policy is good policy
- good policy needs to be discussed, understood, and embedded into current practice
